

## **ROL 3 hydraulic fast clamping system. A time-saving system to be more competitive!**

Rolleri ongoing commitment to research and development has allowed the evolution of fast clamping systems until the brand new **ROL3 System**. This is a hydraulic fast clamping system with customized features. Thank to Rolleri versatility and R&D skills, this system can be applied to different machines and connections, enabling customers to bend faster and so to amortize the investment in short time.

The latest great evolution enables the **use of the hydraulic system with standard Promecam/Amada intermediates, without modifying them.**

***ROL3 Clamp1 and 3: With 150 bar pressure, force on 150mm is 600 Kg.***

**ROL3 Clamp3** replaces the clamp mounted on the intermediate and, thank to a hydraulic driving unit, uses oil pressure to fix upper tooling perfectly. If you choose this clamp, you can mount standard Promecam type tools traditionally by sliding them from one side.

**ROL3 Clamp1** has the same features as Rol3 Clamp1, but it fixes tools with **ROL1 Groove** with further time saving for any tool change.

Thank to spring-activated bearings, which also work as anti-fall system, **ROL1 Tools** can be mounted vertically and, at the same time, be perfectly aligned.
